## What Is Claritin and How Does It Work?

Claritin is a well-known antihistamine commonly used to relieve symptoms associated with:

- Seasonal allergic rhinitis (hay fever)
- Indoor allergies caused by dust, mold, or pet dander
- Sneezing, runny nose, and itchy throat
- Watery or itchy eyes

Its active ingredient works by blocking histamine, the chemical responsible for allergy symptoms in the body. Unlike older antihistamines, Claritin is formulated to be **non-drowsy**, allowing users to stay alert and productive throughout the day.

Because of its long-lasting effect—typically providing relief for up to 24 hours—Claritin remains one of the most widely trusted choices for daily allergy management.
